Pro Metal Halo Lit Signs Diagram

CNC engraved acrylic back-panel with visible thickness

LEDs

Cables

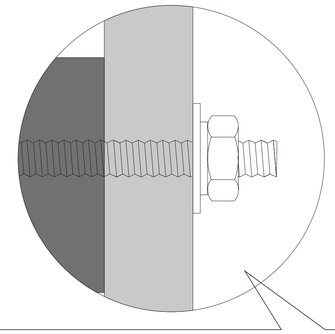

Fabricated stainless steel letters shell

Stud bolts to fix the letters on the backing wall

Screws to fix acrylic back-panel on stainless steel letters shell

Backing wall

Power distribution box with AC transformer inside

If the backing wall is thin and construction can be performed on the another side of the back wall, please use nuts and washers to fix the stud bolts on the back wall, so that the signage can fix on the backing wall more secure.

The AC transformer emits heat during work. We recommend that the AC transformer be placed in a ventilated position or in a power distribution box with air vents to facilitate heat dissipation, to make the AC transformer have a better service life.
